A Lecture by Bethany Schulze

A field and analysis lead for the Pacific Offshore Bat Project for U.S. Geological Survey
- Western Ecological Research Center

Lecture Details

Bats are active throughout the California coast year-round, and they even migrate over the ocean! What are they doing? Why does it matter? How many bat species might fly over your backyard? Find out by joining us for an evening with Bat Ecologist Bethany Schulze of U.S. Geological Survey. Bethany will highlight findings from recent research on the California Coast and offshore rocks and islands, with a focus on what's happening on the North Coast.
