From the Quiescent Center to the UC Botanical Garden

DR. LEWIS FELDMAN
UNIVERSITY OF CALIFORNIA BERKELEY

Lewis Feldman is Professor of Plant Biology at UC Berkeley and the Director of the UC Botanical Garden.

He is a graduate of UC Davis and received his Ph.D. from Harvard, after which he came to Berkeley on a post doctoral fellowship. Subsequently, he joined the faculty of the UC Berkeley Department of Botany (now the Department of Plant and Microbial Biology) where he has spent his entire academic career as a Professor of Plant Biology. He is a plant developmental biologist and for his research has focused on root development, emphasizing the controls of pattern formation, understanding how roots respond to gravity and investigating the adaptations by which roots respond to changes in their environment, such as to drought and salinity. He remains involved in teaching and serves as a long-time instructor in Berkeley’s large introductory biology class, with over 750 students. His main thrust as Director of the UC Botanical Garden is to ensure that the plant collection is curated and well managed, which involves raising funds to maintain and update the facilities for caring for the plants. Additionally, as Director, he works to promote Garden activities in Conservation, Education, and Research.
